Event Display
status/plans

Requests from Muon group:

🔴 ***Message from Michael Schmitt schmitt@fnal.gov***
➡️ ***Using of new geometry, new muon code(mainly to fix CMP bugs)***
➡️ ***Depiction of the CMX or IMU***
➡️ ***To display the extrapolation of COT tracks which have been matched to muon stubs***
🔴 ***Message from Kevin Lannon lannon@uiuc.edu***
➡️ ***change the default scale at which the COT display is shown so that the entire CMP detector fits inside the window***

➡️ ***Plans:***

🔴 Select events on Myron Mode to be committed tomorrow
🔴 SVT tracks adding – ASAP (depends also on the SVT group)
🔴 To accomplish muon requests (probably as a parallel task with SVT)

I've got also mails with piece of code, list of requests/bugs – so I'm informed what and how to do.

What I need are a couple of files with data / simulated events for future tests of muon part of Event Display.
